

Step One - Assemble Lower Frame

Arrange the assembled frame pieces as shown below, making sure the snaps are facing out. Insert the rails into one side of the frame, making sure the rail with Velcro is on top. Slide the other end of the rails into other side of the frame.

Step Two - Attach Counters

Attach the counter legs to the lower rails. Assemble the upper brace and attach it to the counter legs and the sides of the lower frame. Attach the longer lower counter brace between the two counter legs and the shorter braces between the counter legs and lower side rails of the frame.

Place the optional lower shelves on top of the lower counter braces. Arrange the counters in place and press firmly to secure Velcro.

Step Three - Assemble Upper Frame

Connect the front and side pieces of the valance frame together to form the top of the frame. Insert the four slotted frame uprights (with snaps) into the assembled valance frame.

Step Four - Attach Valance & Skirt

Snap the valance to the upper frame and, with two people each holding two uprights, lift the upper frame onto the lower frame.

Snap the skirt to the lower frame.
